

Dear South Sunshine Coast Community

Our fresh water supplies and other forest resources have been under attack for the past one hundred years. The Forest Practices Code, a reasonable management tool, was hijacked first of all by the Glen Clark government and much further by the current Provincial Liberal government. The Forest Practices Code is virtually extinguished. I have not seen this kind of resource grab since the Social Credit Government cashed out in the 1980's! At this pace a Land and Resource Management Plan (LRMP) for the Sunshine Coast will be of little or no short term consequence. One hundred years of forest overcutting will have gouged its mark on the landscape, species and community of our Region. I hope that we can find a way to reclaim our water, land and ethical values. It is never too late, it just takes time. Recovery, will not be in the lifetimes of most or perhaps of any of us, but will occur one way or another. Shame on the government lackies and faceless industrialists who have perpetrated this rape of community values, good science and technical knowhow.

Sincerely,
John R. Dafoe
